```java
17      */
        public void testGetYOfLine() {
19          System.out.println("getYOfLine");
20          int coordinateX = -5;
21          Function instance = new Function();
22          int expResult = -7;
23          int result = instance.getYOfLine(coordinateX);
24          assertEquals(expResult, result);
25
26      }
27
28      /**
29       * Test of getYOfSquareFunction method, of class Function.
30       */
        public void testGetYOfSquareFunction() {
32          System.out.println("getYOfSquareFunction");
33          int coordinateX = -5;
34          Function instance = new Function();
            int expResult = 25;
36          int result = instance.getYOfSquareFunction(coordinateX);
37          assertEquals(expResult, result);
38
```
